THE BALLOTS
THE REPORTED RESULTS
& THE TRUTH-See what REALLY happened to the November 3, 2020 Election

...
Donald J Trump (Telegram)

The news coming out of Georgia is beyond incredible. The hand recount in Fulton County was a total fraud! They stuffed the ballot box—and got caught. We will lose our Country if this is allowed to stand.

According to the just released report from Garland Favorito and the highly respected Voter GA, in Fulton County the hand recount was wrong by 60%; 100,000 tally sheets for ballots were missing; they duplicated thousands of extra votes for Joe Biden; and fabricated vote counts of 100–0 for Biden, many times! Ballot batch sheets fraudulently showed multiple unanimous 100–0 counts for Biden, as well as 150–0, and 200–0. Are we now in a Third World country? What else will they find once the full Forensic Audit takes place?

This means Brad Raffensperger certified the 2020 Presidential Election Scam despite it being “riddled with massive errors and provable fraud.” This proves what Suzi Voyles, who worked Fulton elections for decades, suspected, that fraudulent photocopied ballots were counted for Biden. This is on top of the 35,000 illegal votes recently found in Georgia, and the over 100,000 obsolete voter registrations, plus thousands of dead people, deleted AFTER the election.

Will the Attorney General of Georgia Chris Carr finally act? How has Governor Brian Kemp allowed this to happen?

This is corruption at the highest level. Our Nation is at stake!

Read the report here.
Read the @FDRLSTT article here.
Watch the video of duplicate ballots here.

Highlights from AZ Audit Senate Hearing 7/15

Hand Count

- Ballot duplication nightmare. Serial numbers are required to match the original and duplicated ballot. “Thousands” of ballots are either missing serial numbers or have unreadable serial numbers printed over a dark black ballot identification box. Ken Bennett stated that it’s impossible to determine whether a ballot was duplicated more than once.

Machine Analysis

- Inferior equipment verification process. Senator Peterson noted that if the EAC equipment verification process cannot handle evaluation by an audit, then we need a new certification procedure.
- Cyber security vulnerabilities, missing security event data, and suspicious logins. Ben Cotton of CyFIR emphasized the critical need for router and Splunk log data. He gave 4 reasons:
 - a) The November election system breach reported by Maricopa County and the SoS.
 - b) Extreme cyber security vulnerabilities: the last malware and operating system/ security patch update was in August 2019 when the Dominion software was originally installed. “It would take less than 10 min to gain system-level access.”
 - c) Security event data only goes back to 2/5/21. By design, the security log only holds 20 MB of data. Strangely, on 3/11/21, there were 37,646 queries for a blank password that had had the effect of overwriting the data prior to 2/5/21.
 - d) Suspicious anonymous logons. CyFIR has found anonymous logons at the system level that do not follow the pattern of normal Windows behavior.
- Maricopa County is unable to validate the security of the election system. The evidence provided suggests that only Dominion is able to verify the ICP configuration. Cotton explains that it’s impossible to validate the security of an election system if you cannot independently validate the configuration. CyFIR needs the authentication fobs held by Dominion to check ICP configuration.

Paper Analysis

- Ballot calibration was off by an average of 1000% in some batches leading to bleed-through, which can cause over-votes or inaccurate vote attribution. The County has stated that they use thick VoteSecure paper, which should limit bleed-through in the event of mis-calibration. However, the Cyber Ninjas team found a large number of ballots on very thin paper stock. The ballots printed on-demand at the voting centers on Election Day have the worst calibration issues. More than 168K ballots were affected.

Voter Rolls

- Voter roll anomalies affect more than 107K ballots. Doug Logan “highly recommends canvassing” based on the data his team has reviewed. For example:
 - a) There are 74,243 mail-in ballots with no clear record of being sent out
 - b) 11,326 people who voted do not show up on the 11/7 voter rolls, but are listed in the 12/4 database
 - c) 3,981 people who voted on Election Day were registered after 10/15, which is a violation of state law
 - d) Approximately 18k people voted on Election Day but were subsequently removed from the rolls

Envelopes

- Maricopa County did not turn over images of the envelopes as requested in the January subpoena

Closing Remarks

The hearing concluded with a review of the 17 missing items needed to complete the audit, many of them already subpoenaed, including router data, Splunk logs, hardware tokens, envelope images, chain of custody documentation, and all portable media. Senator Fann stated that the Senate will likely have to go back to court to enforce the subpoena and retrieve the remaining items.

...
President Trump tonight released the letter he received from the former US Attorney for the Eastern District of Pennsylvania, William McSwain. In the letter McSwain shared the following:

https://www.scribd.com/document/515512745/Letter-to-President-Trump#from_embed

President Trump mentioned yesterday at the CPAC event in Texas that the US Attorney in Pennsylvania sent the President a letter recently where he claimed former AG Bill Barr told him not to investigate the crimes and corruption that occurred in the 2020 Election in that state. Tonight the President released the letter. Yesterday President Trump told the CPAC crowd in Texas that recently a former US Attorney in Pennsylvania sent the President a letter stating that he was told by AG Barr not to investigate election crimes in Pennsylvania.
